

## Computer Hardware Technology

### What You Will Learn

This course teaches the basic electronic functions and general repair of a computer. Participants will describe the various forms of microprocessors, coprocessors, bus structures, POST, BIOS, and how to find technical support. Participants practice on CMOS settings to realize the importance of CMOS and how to restore a destroyed CMOS configuration. The working mechanics and electronics of floppy and hard disk drives are discussed in class and tested in lab settings. Methods of data storage (IDE, RLL, MFM, ESDI, and ARLL) are discussed. Documentation and technical support are taught by source list and practice.
